-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 11 July 2005.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-10, 12-14, 17, 20, 22-30, 35, 37, 39 and 41-49 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-10, 12-14, 17, 20, 22-30, 35, 37, 39 and 41-49 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

The amendment and remarks filed 07/11/05 have been acknowledged and entered.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10, 12-14, 17, 20, 22-30, 35, 37, 39, and 41-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Torek et al. (6,758,938) in combination with DeGendt et al. and EP'177.

Torek et al. disclose a method for stripping a layer from a semiconductor wafer. The method comprises introducing ozone into a process chamber and activating a water spray for a first predetermined amount of time, thereby creating a water layer on a semiconductor wafer, wherein the water layer transport high concentrations of the ozone to the semiconductor wafer. The reference discloses controlling a thickness of the water layer. The reference discloses rotating the workpiece. The reference also discloses spraying a heated water and forming a boundary layer of a heated liquid. See col. 2, lines 7-57, col. 3, lines 20-26, col. 5, lines 38-45, col. 7, lines 19-65.

Torek et al. teach all limitation with the exception of moving the liquid jet at speed sufficient to penetrate

through the boundary layer, and the sonic energy as claimed.

DeGendt et al. as discussed supra in paper No. 041305 disclose a method of cleaning a workpiece. The method comprises, providing a layer of heated liquid on the workpiece, the temperature, providing ozone, and removing contaminant, and rinsing the workpiece, and the sonic energy as claimed. See col. 3, line 59- col.4, line 62, col. 7, line 4-col. 8, line 12, and the claims.

EP'177 as discussed supra in paper No. 041305 discloses a method for etching semiconductor wafer. The reference teaches rinsing the substrate with liquid jet to sweep away the HF solution, and spinning the substrate, and controlling the thickness of the layer of processing

liquid. See the abstract, Fig. 1, page 2, lines 55-58, page 3, lines 11-page 4, line 24, and the claims.

It would have been obvious for one skilled in the art to use the rinsing jet, and spinning substrate, taught by EP'177 in the Torek et al. process to enhance the cleaning process, by sweeping away the contaminants from the surface of the substrate, see col. 3, line 56- col. 4, line 2.

EP'177 does not teach moving the liquid jet, using swing arm, the diameter, the pressure as claimed.

It would have been obvious for one skilled in the art to adjust the pressure and moving speed to obtain optimum results. Using swing arm is well known in the art.

Claims 30, 35, and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Torek et al in combination with DeGendt et al. and EP'177 and Kunze-Concewitz (5,964,952).

Torek et al, in combination with DeGendt et al. and EP'177 as discussed supra do not teach using steam as claimed.

Kunze-Concewitz et al. disclose a method of cleaning surfaces with water and steam, a water film is applied to the contaminated surface and steam sprayed into the water film and through the water film into the contaminated surface, whereby contaminants in the contaminated surfaces are removed. See the abstract , Figs. 5, 9, and

12-15, col. 2, lines 13-48, col. 3, lines 12-32, col. 5, lines 6-col. 6, 61, and the claims.

It would have been obvious for one skilled in the art to use the steam taught by Kunze-Concewitz in the Torek et al. in combination with DeGendt et al. and EP'177 to improve the cleaning process and to enhance the cleaning process.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-10, 12-14, 17, 20, 22-30, 35, 37, 39, 41-49 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to

Application/Control Number:
